Brian Ksiazek

Digital technologies are advancing faster and constantly appearing in all areas of our lives, it is crucial to understand how they work to regulate their evolution and the direction they take in the near future. That is why I decided to resume my career in computing so that I could not only constantly learn about the field, but also actively participate in its development.

I like to investigate and solve problems in a creative and efficient way, I learn new techniques quickly. I am an extrovert and easily establish interpersonal relationships, which is why I function well within a team. I am looking for a professional change that allows me to get out of my comfort zone and kick start my growth and my goals.
